SUMMARY

Full-Stack Software Engineer (B.Tech CS, 2026) specializing in React, Node.js, and scalable backend architecture. Built and deployed 3 production-grade full-stack applications integrating 15+ third-party APIs, serverless infrastructure, and AI services. Strong foundation in DSA (340+ LeetCode problems), system design, and modern deployment pipelines (Docker, Vercel, Cloudflare).

EDUCATION

Madan Mohan Malaviya University of Technology (MMMUT)

Bachelor of Technology (B.Tech) in Computer Science and Engineering | CGPA: 7.4/10

Gorakhpur, India

2022 – 2026

PROJECTS

GitBlamed – AI-Powered GitHub Roast Generator

Full-Stack Developer | React, TypeScript, Cloudflare Workers, Hono.js, GitHub API

GitHub | Live Demo

- Built and deployed a full-stack web app analyzing GitHub user activity via the GitHub GraphQL API, generating AI-powered commit-streak roasts using React 19, TypeScript, and Vite.
- Architected a serverless backend on Cloudflare Workers with Hono.js, implementing KV caching (24h TTL) and rate-limiting to reduce redundant API calls and stay within GitHub API quotas.
- Designed a multi-provider AI fallback chain (Gemini Flash, Groq, Claude) to maintain uptime during provider rate limits or outages.
- Shipped shareable OG cards and an activity-calendar visualization in a monorepo architecture; live in production on Vercel.

Multi-App Automation Platform

Full-Stack Developer | React, Node.js, Express, APIs

April 2024 – Dec 2024

GitHub

- Engineered a no-code automation platform (Zapier-style) for cross-app workflow automation to connect 15+ popular APIs (Gmail, Slack, Google Sheets, Twitter, Stripe) and build custom workflows without coding.
- Developed a drag-and-drop workflow builder with conditional logic, triggers, and actions using React, Node.js, and Express.
- Implemented secure user authentication and multi-workspace access control.
- Designed an API connection wizard simplifying complex integration flows for non-technical users.

Real-Time Quiz Application

Full-Stack Developer | Node.js, MongoDB, Socket.io

April 2025 – Aug 2025

GitHub

- Created a real-time multiplayer quiz app supporting 5+ concurrent users using Socket.io for bidirectional communication.
- Designed a live leaderboard system with instant score updates and real-time ranking synchronization.
- Implemented session management and game logic on Node.js backend with MongoDB for persistent data storage.

SKILLS

Frontend: React.js, TypeScript, JavaScript, TailwindCSS

Backend: Node.js, Express.js, RESTful APIs, Hono.js, Socket.io, Serverless (Cloudflare Workers)

Languages: Java, JavaScript, Python, TypeScript

Databases: MongoDB, MySQL, PostgreSQL

DevOps & Tools: Git, GitHub, Docker, Vercel, CI/CD basics

Core Concepts: Data Structures & Algorithms, System Design, OOP, API Design, Caching & Rate Limiting, Authentication & Authorization

ACHIEVEMENTS & CERTIFICATIONS

- Solved 340+ algorithmic problems on LeetCode, demonstrating strong DSA and problem-solving proficiency.
- Programming using Java – Infosys
- Build a Backend REST API with Node.js – Udemy
- NoSQL – Infosys

POSITIONS OF RESPONSIBILITY

- Captain, University Football Team, MMMUT** – Led team in inter-college tournaments; managed training, strategy, and coordination.
- Organizer, AAYAAS (Annual Sports Fest), MMMUT** – Coordinated logistics for 15+ events with 200+ participants.
- Executive Member, Sports Sub-Council, MMMUT** – Contributed to planning and promoting university sports programs.
